HTceramix' Exhibit at the Fuel Cell Seminar

Palm Springs, California, November 14 2005 - HTceramix (HTc) presented the company and its SOFC products at the exhibition of the Palm Springs 2005 Fuel Cell Seminar, the largest fuel cell conference in the world. HTc' booth was constantly filled with company representatives demonstrating strong interest in HTc. On display were SOFC cells, the Lilith quick- starting portable SOFC system and models of HTc' R and S-design stack as well as the HoTbox™, a fully integrated high temperature solution for SOFC system developers. HTc' stack testing service, in which a customer's cells are integrated into HTc' SOFConnex™ based stack, also proved popular. Ms. Thorn, HTc fuel cell engineer and technical sales representative, gave a presentation on HTc including a company overview, the latest technical results, business strategy, and products. All of the products are currently for sale, so if you are interested in obtaining a quotation, please email sales@htceramix.ch or call +41 24 426 1084.

HTceramix SA (www.htceramix.ch) is a dynamic and rapidly progressing developer of high temperature electroceramic applications in the field of energy and gas conversion devices. At the heart of its development is the SOFConnex™ based stack which uses a unique approach for stacking ceramic fuel cells. In 2005, HTc started commercializing SOFC stacks to educational institutions and strategic partners.
